

Our **METRO RINGS** are designed for use in medium speed applications on all fiber types and counts. These rings offer an excellent quality/price ratio and are available for any brand of spinning frame.

PRODUCT FEATURES & BENEFITS

- Made from the best high carbon-high chrome steel to ensure increased hardness (HRC 60-64), provides excellent wear resistance.
- Smooth, micro-porous surface creates excellent sliding properties which accelerates the formation of the required fiber lubrication film creating an ideal traveler running path.
- Good resistance to corrosion.
- Metro rings can be also offered in a reversible style and mounted in an aluminum holder. (RRAH - "Reversible Ring on Aluminum Holder"). This system offers several advantages including less weight providing less power consumption for the ring frame, double the ring life (2 flanges) and lowers future cost when rings need to be replaced.
